Pool Overview

The investment objective of the Starlight Global Private Equity Pool is to achieve long-term capital appreciation by investing in a diversified portfolio of global private equity investments and publicly traded global equity securities.

*Where this is a new fund, the risk rating is only an estimate by Starlight Capital. Generally, we determine the risk rating for each fund in accordance with a standardized risk classification methodology in NI 81-102 that is based on the fund's historical volatility as measured by the 10-year standard deviation of the returns of the fund. Standard deviation is a common statistic used to measure the volatility and risk of an investment. Funds with higher standard deviations are generally classified as being more risky. Just as historical performance may not be indicative of future returns, a fund's historical volatility may not be indicative of its future volatility. You should be aware that other types of risk, both measurable and non-measurable, also exist.
